Creating an Instance Check-Point

This guide will cover Creating an Instance Check-point within Enseva Azure.

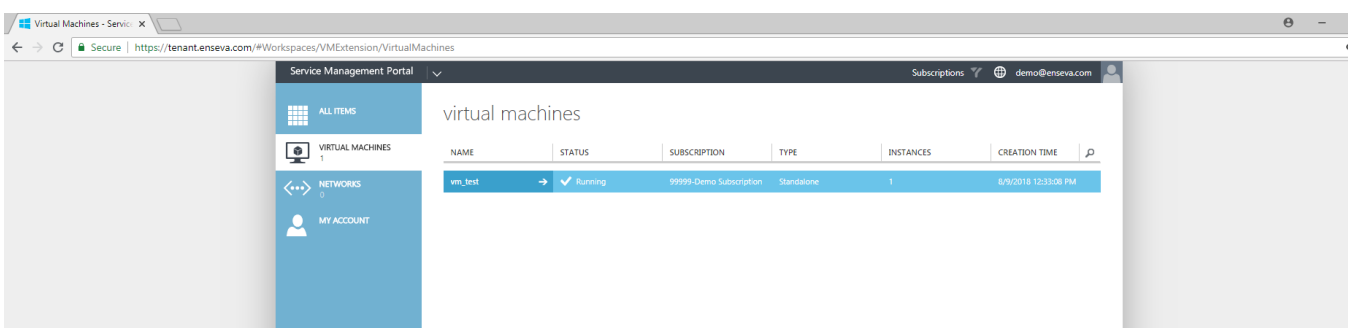

Creating an Instance Check-Point

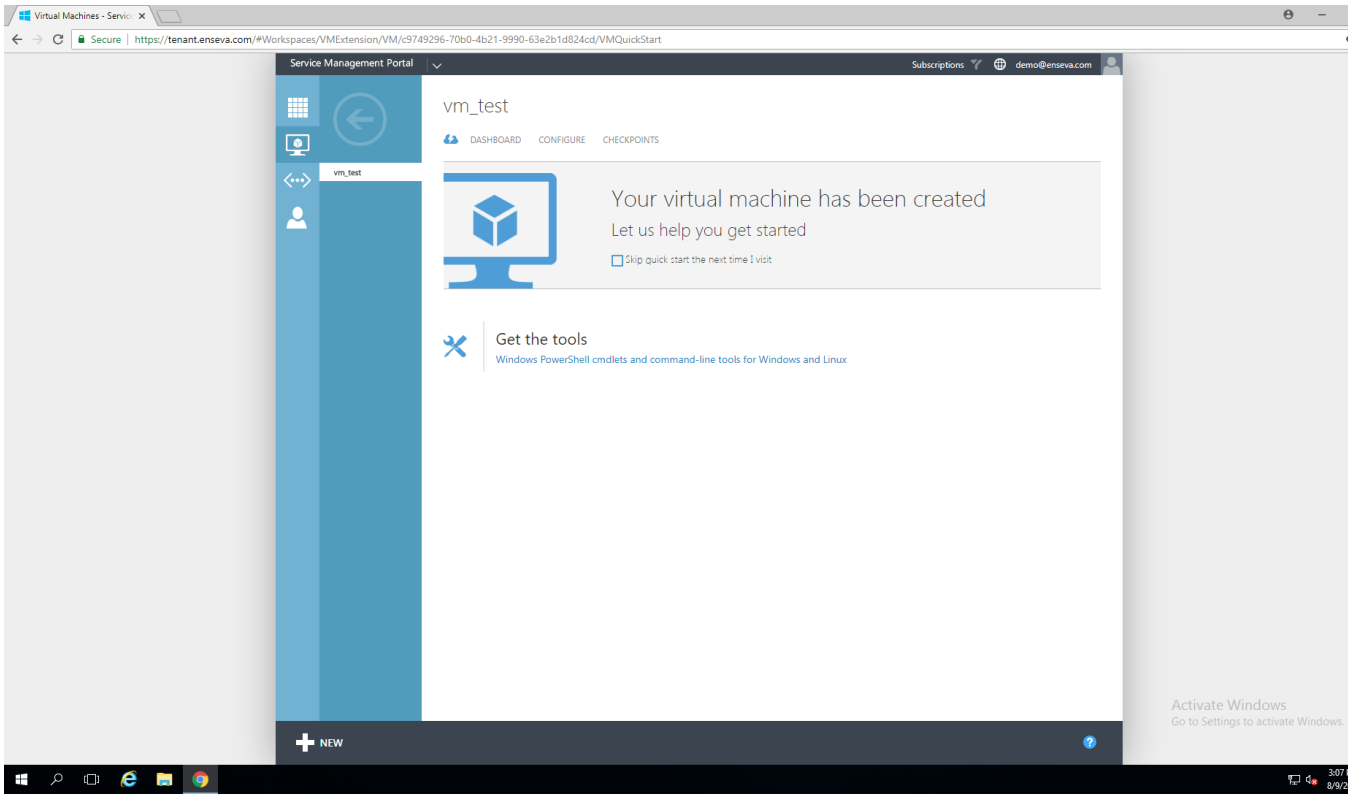

1. **Navigate to the Tenant Portal**

   Navigate to https://tenant.enseva.com and enter your login credentials, then sign into your account.
   For the purposes of this tutorial, we already have a virtual machine created with the friendly name of 'vm_test'

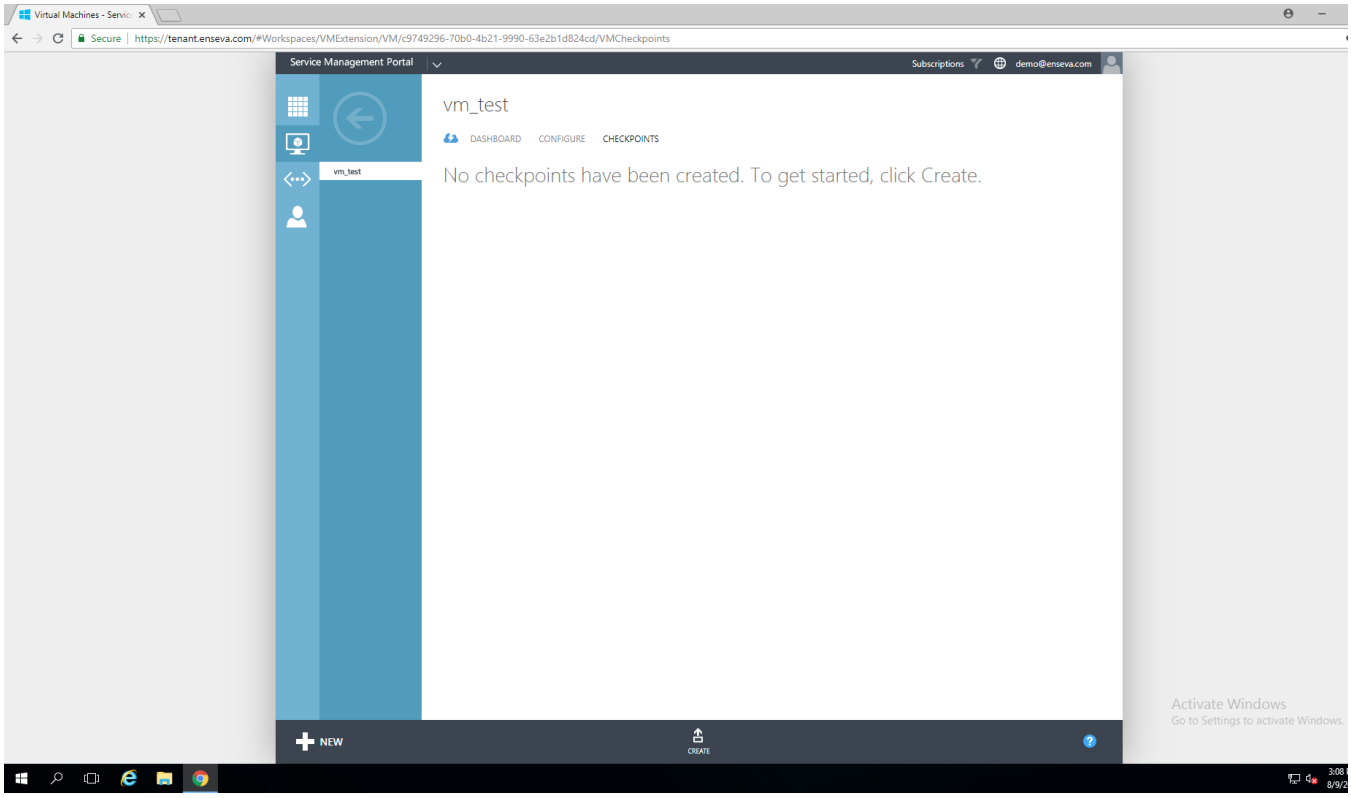

2. **Select Virtual Machine**
   Click on the virtual machine's name in which you want to create a checkpoint, this will bring you to the vm's dashboard.

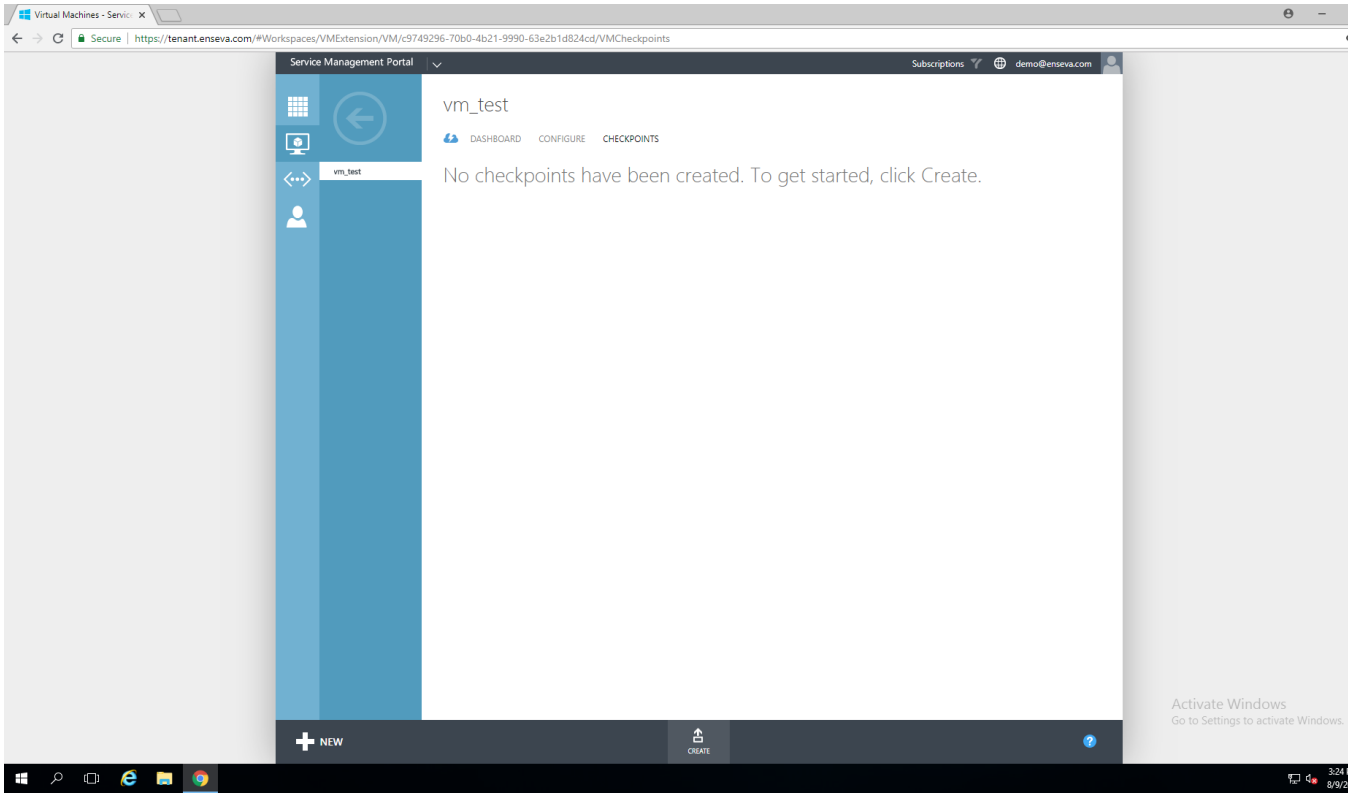

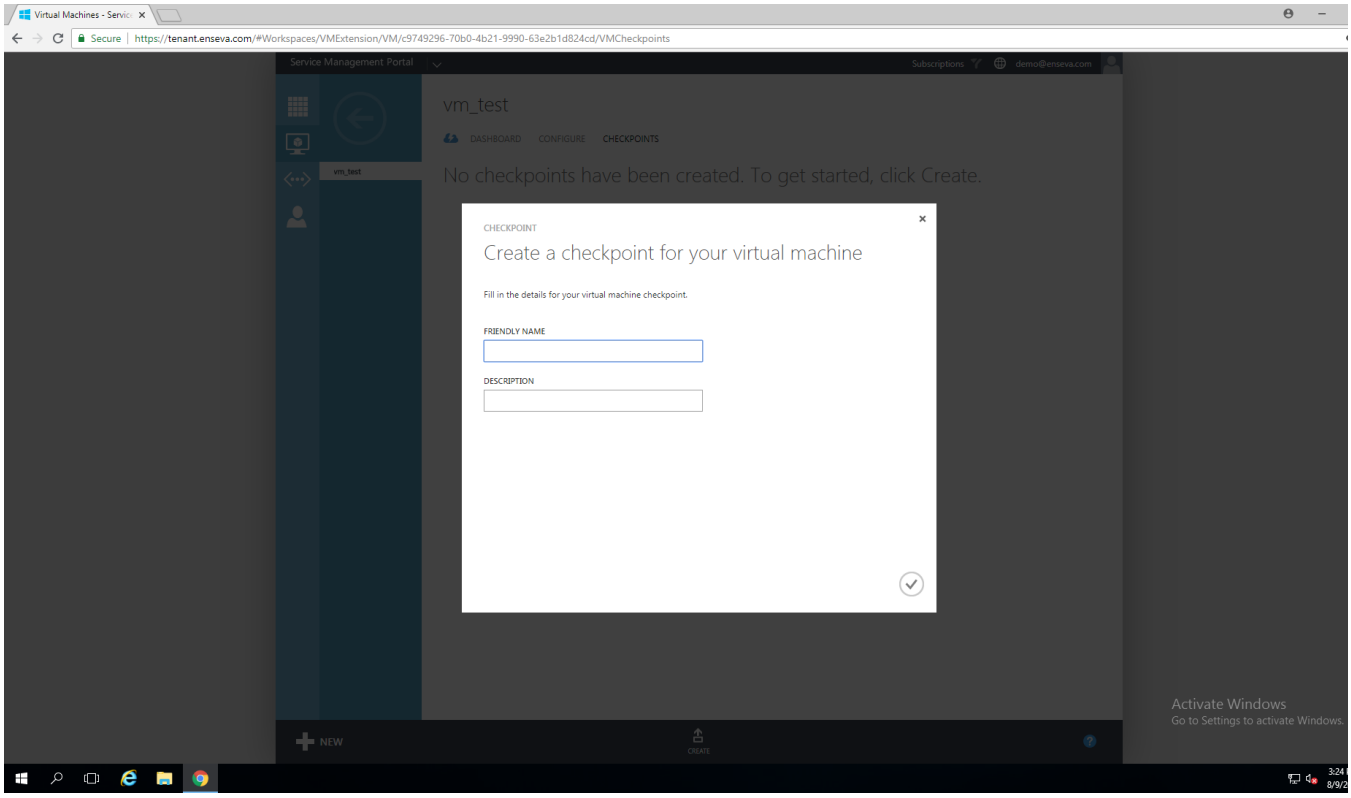

3. **Select Checkpoints**
   From the dashboard, select checkpoints near the top of the page.

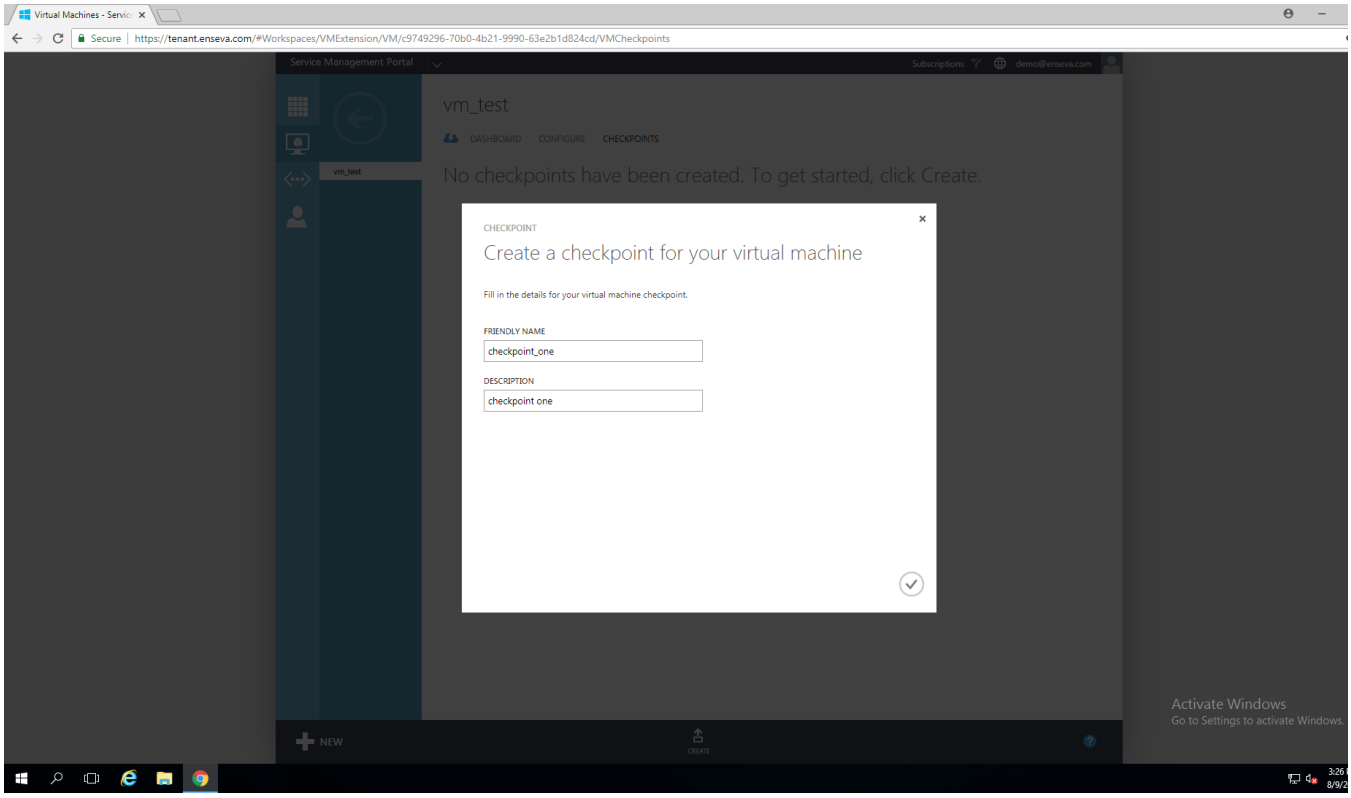

4. **Create a Checkpoint**
   Near the bottom of the page click on the 'create' button.

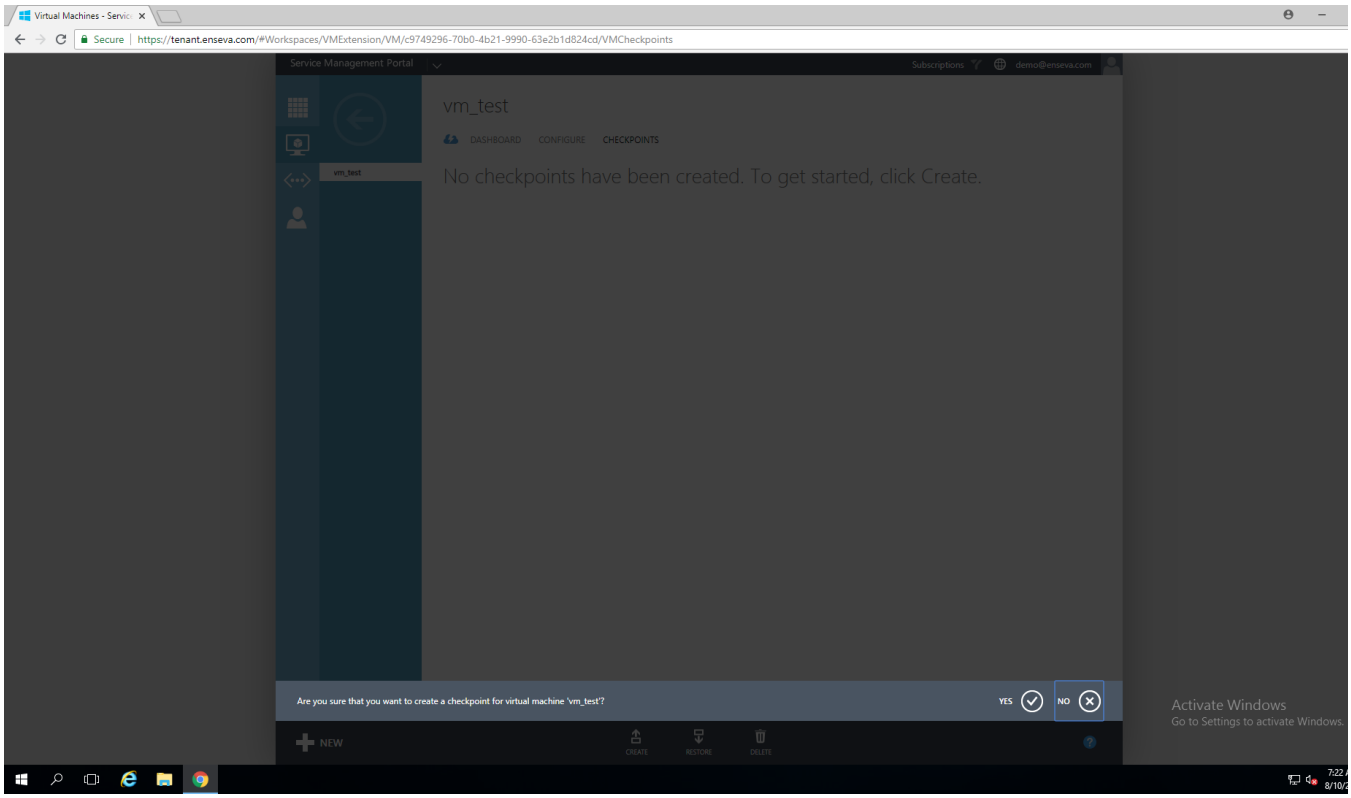

5. **Specify Checkpoint Details**
   A window will appear that allows you to specify a friendly name for your checkpoint and a description.

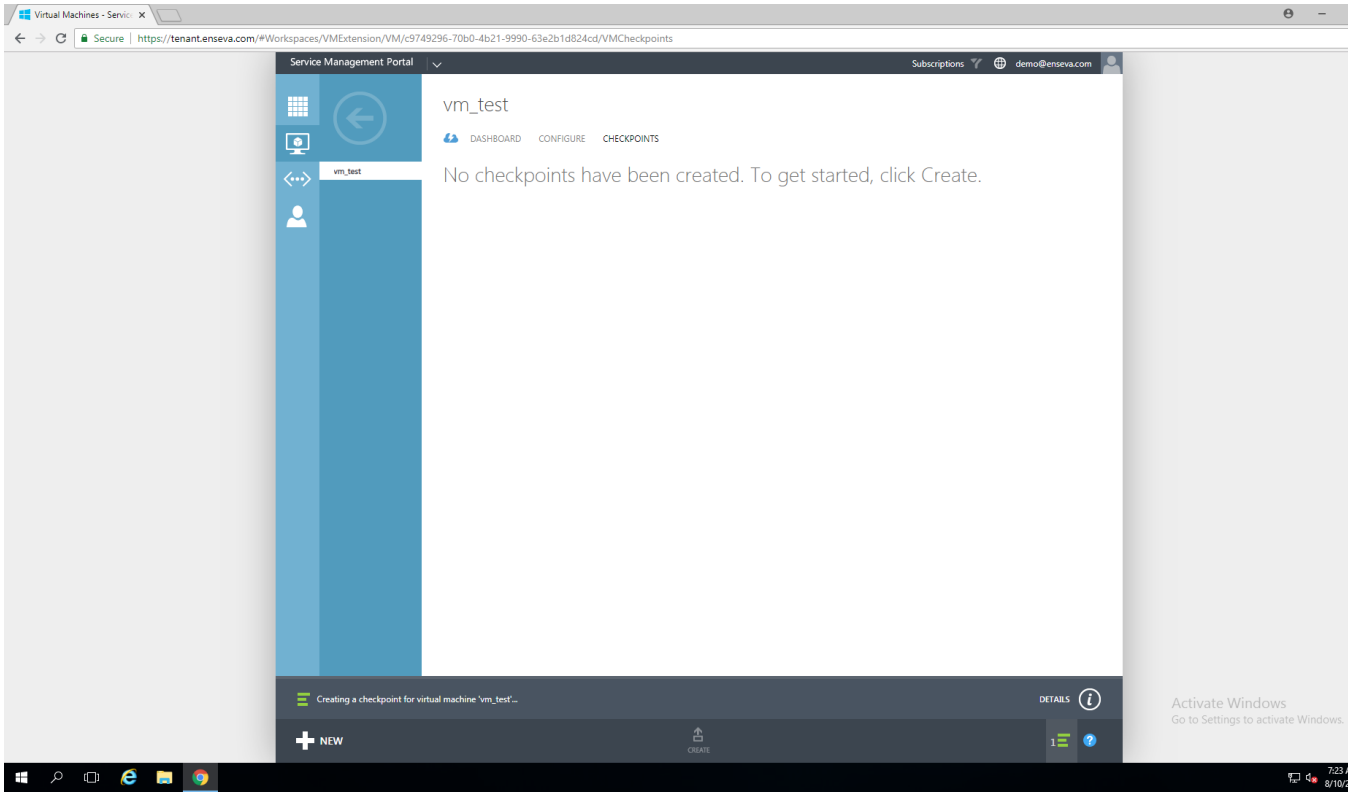

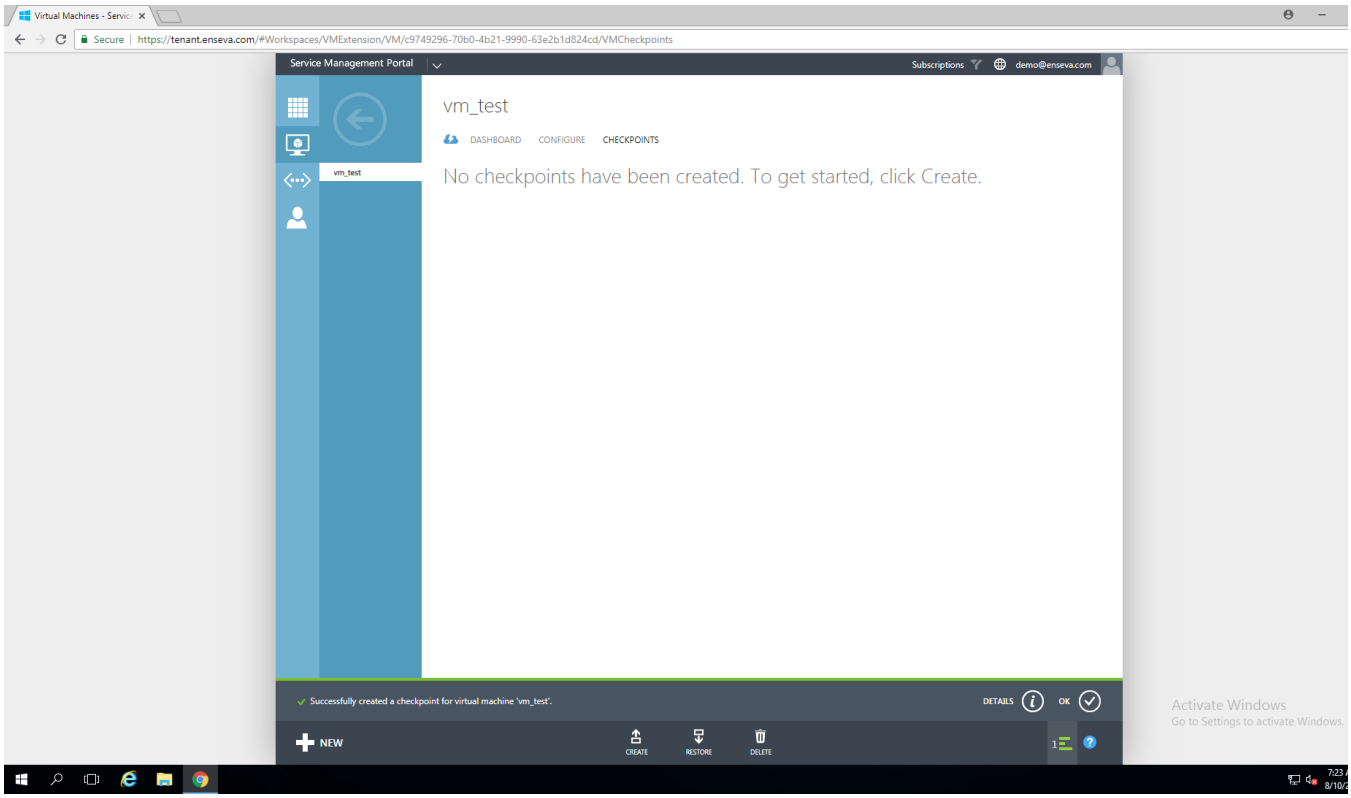

6. **Confirm Selection**
   A pop-up bar will appear towards the bottom of the screen asking you to confirm your decision, select 'Yes'

CHECKPOINTS
No checkpoints have been created. To get started, click Create.
Are you sure that you want to create a checkpoint for virtual machine 'vm_test'?
YES
NO
NEW
CREATE
RESTORE
DELETE
Activate Windows
Go to Settings to activate Windows.

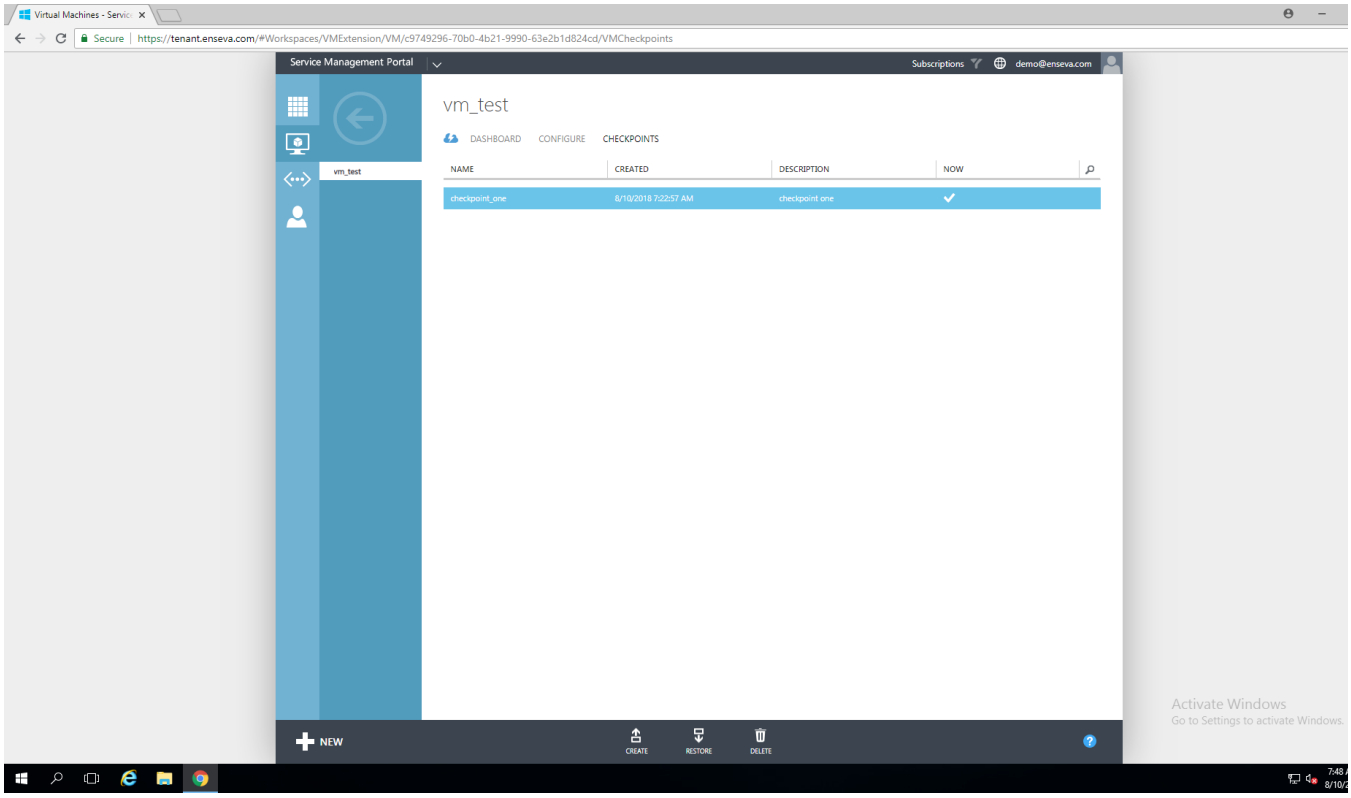

7. **Verify Creation**
   A pop-up bar towards the bottom of the screen will indicate that a checkpoint is being created, wait for this operation to complete.

   When the operation has finished you will notice the message within the bottom pop-up bar change to Successfully created a checkpoint for virtual machine 'your_vm_name'

8. **Review Checkpoint**
   If you don't see your checkpoint appear, try refreshing your page to confirm it has been created.
