

# Creating an Instance Check-Point

This guide will cover Creating an Instance Check-point within Enseva Azure.

## Creating an Instance Check-Point

### 1. Navigate to the Tenant Portal

Navigate to <https://tenant.enseva.com> and enter your login credentials, then sign into your account.

For the purposes of this tutorial, we already have a virtual machine created with the friendly name of 'vm\_test'

### 2. Select Virtual Machine

Click on the virtual machine's name in which you want to create a checkpoint, this will bring you to the vm's dashboard.

### 3. Select Checkpoints

From the dashboard, select checkpoints near the top of the page.

#### 4. Create a Checkpoint

Near the bottom of the page click on the 'create' button.

## 5. Specify Checkpoint Details

A window will appear that allows you to specify a friendly name for your checkpoint and a description.

## 6. Confirm Selection

A pop-up bar will appear towards the bottom of the screen asking you to confirm your decision, select 'Yes'

vm\_test

<>

vm\_test

+

vm\_test

DASHBOARD CONFIGURE CHECKPOINTS

No checkpoints have been created. To get started, click Create.

Are you sure that you want to create a checkpoint for virtual machine 'vm\_test'?

YES  NO

+ NEW

CREATE RESTORE DELETE

Activate Windows  
Go to Settings to activate Windows.

## 7. Verify Creation

A pop-up bar towards the bottom of the screen will indicate that a checkpoint is being created, wait for this operation to complete.

When the operation has finished you will notice the message within the bottom pop-up bar change to Successfully created a checkpoint for virtual machine 'your\_vm\_name'

## 8. Review Checkpoint

If you don't see your checkpoint appear, try refreshing your page to confirm it has been created.
